

# Smart Sprinkler

## Worksheet No. 2 – Changing garden characteristics

**Objective:** This worksheet explores whether garden characteristics affect your smart sprinkler operating rules. Your task is to develop a set of operating rules for a smart sprinkler that minimises the amount of water used and ensure at least 80% garden health.

1. Select 'Enable garden characteristics settings' on the Options tab. This will reveal new options that allow you to set the garden size and type. Do you need to adjust your operating rules for a garden that is:

- a) Large garden area and native garden type?
- b) Large garden area and normal garden type?
- c) Medium garden area and intensive garden type?
- d) Medium garden area and normal garden type?
- e) Medium garden area and native garden type?
- f) Small garden area and intensive garden type?
- g) Small garden area and normal garden type?
- h) Small garden area and native garden type?

Remember your garden needs an average garden health score of at least 80%!
