

# Smart Sprinkler

Worksheet No. 4 – Using Forecast Information

**Objective:** This worksheet explores using forecast information to develop operating rules for the smart sprinkler. Your task is to develop a set of operating rules for a smart sprinkler that minimises the amount of water used and ensure at least 80% garden health.

1. Select 'Enable forecast information' on the Options tab. This will reveal new rule options that allow the sprinkler to use weather information from the Bureau of Meteorology. Can you use the new forecast weather information to reduce water usage? Remember your garden needs an average garden health score of at least 80%!

Use this space to record your final best rules:
